

MUHAMMAD ARIF

0136811149 | meowarif@gmail.com | www.linkedin.com/in/muhd-arif-asri

Committed and passionate college student working toward a degree in Electrical Engineering at Universiti Teknologi Malaysia. Aim to use knowledge of High Voltage, Power Electronics and Digital System to satisfy future opportunities.

EDUCATION LEVEL

UITM Dengkil Foundation College – Dengkil, Selangor

Foundation in Engineering, 3.71/4.00

Jul 2021 – Aug 2022

Universiti Teknologi Malaysia (UTM) – Skudai, Johor

Undergraduate in Electrical Engineering, 3.68/4.00

Oct 2022 – Jul 2026 (Expected)

- Awarded dean's list for 3 semesters.
- Relevant Coursework: Digital Electronics, Digital System, Microprocessor and Power system
- Successfully managed several university level programme under residential college.
- Volunteered in "Program Felda Moakil" under Universiti Teknologi Malaysia(UTM).

EXPERIENCES

Sunway Young Talent Competition – Sunway University

Developer

June 2018

- Designing a working passenger tracking with facial scanning for public transport.
- The system was to record and provide safety incase of any accident.
- Data would be deleted once user leaves the transport.

IET Faraday Challenge – Cheras, Kuala Lumpur

Developer

Aug 2019

- Built a working smart waste management system using microprocessor.
- Data collected by each module is updated to database.
- The device is used to maximise the efficiency of workers and cleanliness.
- The Prototype was awarded 2nd place for national level.
- The project was selected to enter showcasing in PICC.

Gamelan - Universiti Teknologi Malaysia

President

Oct 2023 – Jan 2024

- Handled preparation for UTM co-curriculum Program.
- Program includes the protocols for attendance of deputy minister of works.
-

Intership - TNB Engineering Corporation

Operation & Maintenance

July 2025 – Oct 2025

- Posted in KLIA2 District Cooling Plant for internship.
- Learning the principle of every working equipment in the 132kV distribution station for KLIA2.
- Done Simulation for Transformer Automatic Voltage Regulator during failure for confirmation of specification.
- Learning the process of District cooling system and the benefits gain from this type of system.
- Provide assistance in paperwork to purchasing equipments for the plant needs.
- Create a new safety video for updating the company safety procedures.
- On-site experience during technical works.

Final Year Project - Universiti Teknologi Malaysia

Analysis and design of Hybrid NNPC T-Type 9 Level Inverter

Oct 2025 – Present

- This study analyses the T-type NPC inverter performance under SPWM and THIPWM Technique.
- Includes designing the controller for both modulation techniques to maintain constant variable for reliable output and accurate comparison result.
- Simulation and Analyzing the performance of multilevel inverter is done using various type of load for better comparison.
- The goal of the study is to highlight the design and operational advantages of each modulation technique to gain advantage for higher efficiency and better power delivery.

INVOLVEMENTS

CESCO - Universiti Teknologi Malaysia

- Event setup crew

RELEVANT SKILLS

- **Programming Language** : C++, MATLAB
- **Computer Softwares** : Proteus, Atmel Studio, LTspice XVII, TinkerCAD, Power World, Adobe Premiere Pro, Excel, Matlab, Multisim, Microchip Studio.
- **Test Equipments** : Multimeter, Oscilloscope, Power Quality Analyzer.
- **English Proficiency (2021)** : Achieved Band 4 in Malaysian University English Test(MUET).
- **Communication Skills** : Strong
- **Problem Solving Skills** : Strong
- **Leadership Skills** : Strong
